

iPhone® and iPad® not included

Main Features

- Control the XDJ-R1 wirelessly using an iPhone®, iPad®, or iPod touch® with Pioneer's all-new "remotebox" app, available free of charge on the App Storesm
- Wireless Direct allows reliable wireless connectivity with an iOS device, even when Wi-Fi™ isn't available
- Auto Beat Loop function automatically loops music at a specified tempo
- Features include Beat Sync, Hot Cue, Sampler, Beat FX, and Sound Color FX
- Virtual DJ Limited Edition software included with every system
- Equipped with dual CD players and USB port

FEATURES

1 Professional DJ System with Mobility

By utilizing the "remotebox" app¹ (available free of charge on the App StoreSM) with an iOS device such as iPhone[®] or iPad[®], the XDJ-R1 can be remotely controlled wirelessly, giving DJs the ability to continue their music mixing performance even when they move away from the system. Many of the system's functions can be accessed directly on the display of a compatible smart device including controlling volume levels, choosing and changing songs as well as the ability to mix songs from a USB device plugged into the system. Users can also apply the "Auto Beat Loop" function² that automatically loops music at a specified tempo as well as intuitively control various effects using the X-Y pads from a smart device.

2 Media Support Including Dual CD Players

Unlike conventional systems, the XDJ-R1 is equipped with dual CD players in addition to a USB port for media playback. The system supports a variety of different music formats including conventional compact discs and MP3, AAC, WAV and AIFF files stored on CD-R/RW and USB storage devices. For added convenience, the unit also offers MIDI support for operation of various DJ software.

3 Free Virtual DJ Limited Edition

The Virtual DJ Limited Edition DJ software³ by Atomix Inc. is included with the purchase of an XDJ-R1. The software features an easy-to-use user interface for the XDJ-R1 and enables optimum enjoyment of various DJ play styles with features including loops, effects, a sampler and 4-channel mixing.

4 Mix and Match Features

The XDJ-R1 offers a multitude of fun and convenient features for creating unique mixes including:

- **Beat Sync⁴** – With a touch of the Sync button, the system automatically synchronizes the beats of songs analyzed through Pioneer's rekordbox music management software
- **Hot Cue** – The system features three points of Hot Cues to enable playback of music from specified points
- **Sampler** – For added effects, the system's Sampler function enables recorded sampling sounds to be added with the press of a button. Sound sources can be recorded from songs on a USB storage device or a compact disc
- **Beat FX** – Four different effects including Trans, Flanger, Echo and Roll are available to combine with songs currently playing
- **Sound Color FX** – The system offers four additional effects (Filter, Crush, Noise and Jet) for more creative mixing options
- **Quantize Function** – Automatically corrects synchronization of effects when using Auto Beat Loop or Beat Effect.

5 Additional Features

- **Noise Reduction** – To significantly reduce noise, internal analog and digital circuits were separated, and the distance for digital conversion of analog input signals was shortened. All signal processing is conducted using a high-performance CPU for clear audio output.
- **Independent 3-band Isolator**
- **Internal sound card (Audio Interface)**
- **Complete with Master Out (XLR), Booth Out, AUX and MIC ports**
- **Optional carrying case (DJC-SC3) available (sold separately)**

¹ A dedicated application for control of XDJ-R1.

² Operates with music that has been tempo-analyzed (BPM: Beat per Minute) using the included rekordboxSM software, or when tempo is automatically detected during playback.

³ Virtual DJ Limited Edition download information will be available at <http://pioneerdj.com/support> June, 2013

⁴ Operates with music that has been beat-analyzed using the included "rekordboxSM" software.
