

## INNOX MB-12

### Lectern lamp with rechargeable battery

#### User instructions & warnings

**Battery hazard:** The INNOX MB-12 is equipped with a built-in Li-ion battery. This battery is located in the base of the lamp.

The built-in battery has a capacity of 1000 mAh and powers the lamp for around 4 hours.

The battery is protected by the plastic housing of the MB-12. The battery cannot be replaced by the user.

#### CAUTION

Do not expose batteries to excessive heat such as sunshine, fire and the like.

Do not leave batteries in an extremely high-temperature environment, as this may cause explosions or leakage of flammable liquids or gas.

Do not burn batteries, do not place batteries in a hot oven, and do not crush or cut batteries, as this may cause explosions.

Do not subject batteries to extremely low air pressure (high altitudes), as this may cause explosions or leakage of flammable liquids or gas.

Do not dispose of this product with general household waste. Batteries can contain substances that may harm the environment. If they are properly recycled, used batteries are a valuable source of reusable materials. Contact your local government for information on battery disposal.

#### Operating instructions

1. The lamp has one button, which is used to switch the lamp on and off and to change the colour temperature.
2. Press the button to switch the light on, and press it again to switch the light off.
3. Press the button repeatedly to cycle through the 3 colour temperatures: white light, warm light, and white + warm light.

## Features

- Double-headed lamp with two independent lamp arms and lamp heads. The angle and direction of each can be adjusted separately, so you can light two areas at the same time (for example a book and a keyboard).
- The lamp heads can be rotated 180° for even light in any situation.

## Charging

The lamp is powered by a built-in rechargeable lithium polymer battery. On a full charge, the battery lasts about 4 hours, depending on use.

1. Connect the USB charging cable to a USB port of a computer or laptop, or to a USB charger (such as a smartphone charger). Use a standard 5 V USB charger with a maximum output of 2 A.
2. Charging takes about 2 hours. While charging, the indicator light flashes red. When the battery is fully charged, the indicator light stays green.

## Product care

1. If the button does not work while the lamp runs on battery, connect the lamp to a USB charger or to a USB port of a computer or laptop. This usually solves the problem.
2. Recharge the lamp at least once a month, if possible.
3. Only clean the lamp with a soft, damp cloth when needed.
4. Do not use the lamp if wires or internal parts are exposed after it has been dropped, and report this to your dealer immediately.
5. Never use a USB charger with an output higher than 5 V / 2 A to charge the lamp.

## Specifications

| Light              |                          |
|--------------------|--------------------------|
| Light source       | 10 SMD LEDs              |
| Colour temperature | 3 settings (3300–5300 K) |
| LED lifespan       | Approx. 100,000 hours    |
| Power consumption  | 1 W                      |

| Power & battery    |                                                      |
|--------------------|------------------------------------------------------|
| Battery            | Built-in Li-ion, 1000 mAh                            |
| Operating voltage  | 3.7 V DC                                             |
| Battery life       | Approx. 4 hours                                      |
| Charging           | Via USB-C, approx. 2 hours                           |
| Design             |                                                      |
| Type               | LED lamp with gooseneck                              |
| Mounting           | Spring-loaded clamp, adjustable to surface thickness |
| Lamp head length   | 190 mm                                               |
| Gooseneck diameter | 4 mm                                                 |
