INSTRCUTIONS & SPECIFICATIONS

Input: DC 9V/1A Adapter
Outputs: DC 9V/100mA *6
DC 9V/300mA *2

Output Power: Accuracy: 3%
Dimensions: 14.2(L)*3.2(W)*2.4(H)cm
Body Weight: 235g

About Power Stick

We have always implemented the concept of "high efficiency" to the extreme in the design of product circuits.

This power stick is another embodiment of this concept. First of all, it has a minimalist and compact appearance and size design. Most importantly, this power stick has an extremely efficient circuit design. Following the launch of our professional and high- efficient TPS series power supplies in 2025, it is another power supply product that is very suitable for mini pedalboard.

Because of its very efficient circuit design, this power stick has similar ultra-low heat dissipation and low noise characteristics as the TPS series power supply. Each output has an independent short-circuit protection design. It is an excellent partner for the pedal board. Due to the ultra-small size design, you can't even find its existence on the pedalboard. It is an ideal power supply choice for small-sized boards with limited space or effect boards that need to be portable.
